

For Immediate Release

San Diego, California – June 29, 2019 – Today, ClancyCoin, LLC announces a new fork for Bitcoin Core, CLANCYCOIN. This new experimental digital currency will revolutionize the cryptocurrency market, much as renowned author Tom Clancy did to the international thriller. CLANCYCOINs initial coin offering will occur this Saturday, June 29 at a private event in San Diego.

“I like Tom Clancy well enough, I guess,” said founder and CTO Tom Magrino. “And my friend keeps bothering me and hes getting married, so might as well.”

CLANCYCOIN uses peer-to-peer technology to operate with no central authority: managing Tom Clancy-related transactions and issuing money are carried out collectively by the Rainbro 7 network.
